

How Ciudad Empresaria added EV charging to its business ecosystem in Córdoba

One more service within a complex that already brings together offices, coworking, hospitality, and dining for more than 30 companies.

THE CHALLENGE

Ciudad Empresaria brings together offices, coworking, a hotel, and dining options for more than 30 companies on a single site. Electric vehicles were already circulating among employees, visitors, and fleets, with no charging point available inside the complex.

THE SOLUTION

Vulletic installed a 22kW Nova charger in the complex's parking area, with QR access (Punto Verde) so that any company, employee, or visitor can charge their vehicle with no extra steps.

THE RESULT

The charger is now part of the complex's premium offering, adding electric mobility to an infrastructure already focused on eco-efficiency and sustainable growth.

"As a business ecosystem, we want every service on the site to live up to the companies that choose us. Adding an EV charging point supports the way our clients and their teams get around today."

WHY IT WORKS

- ⚡ First EV charging point within a business ecosystem of more than 30 companies in Córdoba capital.
- 🏢 Integrates into an already premium infrastructure (WorldClass offices, coworking, 24-hour security) as one more service.
- 📱 QR access (Punto Verde), frictionless for employees and visitors across the whole complex.
- 🌱 Reinforces the eco-efficiency and sustainability focus that defines Ciudad Empresaria's philosophy.
