

How Opera Fun's apartments added EV charging to their shared parking garage

The same model already working at the shopping center, now as a value differentiator for those who live in the building.

THE CHALLENGE

More and more apartment buyers already own or are about to own an electric vehicle, but most residential developments don't offer charging infrastructure in their shared parking garages or plan for it as part of the building.

THE SOLUTION

Vulletic installed a Nova charger in the shared parking garage of the Opera Fun apartments, available to any owner or visitor with an electric vehicle, with no need for individual construction work per unit.

THE RESULT

Grupo Proaco extends to its apartments the same model it already validated at the Opera Fun shopping center, adding EV charging as one more amenity of the building and a differentiator against other residential developments in Carlos Paz.

"We had already proven at the shopping center that EV charging is a real differentiator. Bringing it to the apartments was the natural next step: we added value to the building without asking each owner for individual construction work."

Opera Fun — Apartments
Grupo Proaco — Carlos Paz

WHY IT WORKS

-  The shared parking garage adds EV charging with no individual construction work per unit and no cost for any owner.
-  Extends to the apartments the same model Grupo Proaco already validated at the Opera Fun shopping center.
-  A value differentiator versus other residential developments in Carlos Paz that don't yet offer EV charging.
-  Shared Nova charger, available to both owners and visitors with electric vehicles.
